

Why Become A SafePeak™ Authorized Reseller or VAR?

Opportunity

DCF Technologies Ltd. is looking for resellers, consulting partnerships and VARS for SafePeak. SafePeak for SQL Server solves one of the biggest problems facing enterprises and fast growing companies, how to rapidly and efficiently access the massive amounts of information stored in organizational databases and accessed via online portals, ecommerce sites, CRM, ERP and OLTP systems.

Why Resell SafePeak

- Comprehensive solution easy to understand, install and support for your customers
- Increase revenues with excellent margin opportunities and expanded service offerings
- Opportunity to cross-sell and up-sell into existing customer base
- Sales and marketing assistance, leads and referrals for promoting and selling
- Benefit from direct access to priority technical support
- Work directly with an experienced team of industry experts

Product Brief

SafePeak dramatically accelerates data access and retrieval providing immediate results, with no need to change existing databases or applications. It enables companies to maximize their investment in existing infrastructure while avoiding costly hardware and software upgrades. Increasing database response time from SQL database queries and enhancing system scalability by orders of magnitude, SafePeak ensures high availability for mission-critical applications and safeguards against unpredictable traffic spikes and surges of usage.

SafePeak enhances scalability by offloading the handling of "Select" query traffic from operational databases, significantly increasing database capacity for handling transactional queries and updates. This serves to increase overall data and application throughput, while enhancing transaction efficiency. SafePeak leverages existing hardware and software to improve application and database performance with enhanced scalability. It is especially appropriate for Internet applications which experience unpredictable and varying peaks of usage. In addition, SafePeak helps to ensure real-time performance and high availability for traditional businesses running OLTP applications.

Typical Customer

Typical customers for SafePeak for SQL Server are media and information portals, ecommerce sites and companies running internal OLTP, ERP and CRM systems like Microsoft Dynamics and SharePoint. At these organizations, SafePeak provides:

- * **Immediate resolution of data access and retrieval latency and bottlenecks**
- * **Significantly improved performance and throughput, especially at peaks and spikes**
- * **Continuous high availability with 100% data credibility**

SafePeak champions within the organization are generally the internal database manager or administrator or CIO, the outsourced DBA or performance tuning consultant.
